

Hand book for Disaster Prevention Parks

Introduction

What is your purpose of going to the parks? We have various experiences of having fun and relaxing there, playing with children, playing sports, and watching green scenery. Parks have another important function, which is a base for evacuation, rescue and aid in case of a big earthquake. We would like to introduce these functions and facilities, which are set up in the parks, in this handbook. They will become important places if disasters occur. You can plan your actions if a disaster happens in the city.

Mission of the park in case of a big earthquake

Role as evacuation place

Parks can save people's lives in the case of a big fire caused by an earthquake. They can be used as evacuation places. Parks have wide areas and have a lot of trees so people can escape from fire. Also, we advise people to evacuate to parks first when they don't have enough information about the disaster. You should move to designated secure places arranged by local municipal offices after confirming safety in your area.
